Exp 7: TLB effect via page locality (16 KiB pages; huge-page comparison not possible on macOS)
(a) pages touched, 1 line per page
one line per distinct 16 KiB page
same number of lines, packed contiguously
ns per dependent load
distinct pages touched (= lines for the paged layout)
(b) penalty attributed to address translation
256 pg = 4 MiB
2048 pg = 32 MiB
16384 pg = 256 MiB
paged minus packed latency (ns)
distinct pages touched
(c) fixed cache footprint, vary pages
32768 lines (4 MiB) over P pages
ns per dependent load
distinct pages P holding the same 32768 lines
