(a) latency vs bytes, three node spacings
64 B node spacing (n=9)
128 B node spacing (n=9)
256 B node spacing (n=9)
ns per dependent load
10^1
10^0
256KiB
2MiB
footprint (bytes)
(b) same data vs node count
ns per dependent load
10^1
10^0
2^8
2^{10}
2^{12}
2^{14}
2^{16}
nodes in the cycle
(c) repeating cycle vs non-repeating walk
mutating walk (never repeats; ~5 extra cycles per step) n=9
plain random cycle, 128 B nodes
ns per dependent load
10^1
10^0
256KiB
2MiB
footprint (bytes)
